

NovelBaltic

NovelBaltic is a collaboration project for profitable products from non-timber wood products. In this project, collaboration between institutions and industries in Finland, Norway, Estonia, Latvia, Lithuania and China will be carried out.

The objective is to enhance the market uptake of non-timber forest products (NTFP) innovations. The goal is to review the market demand for NTFP in selected regions in China and Asia, evaluate the feasibility of selected business opportunities through techno-economic calculations. This will help SMEs in planning their businesses. In our group, also experimental testing with supercritical extraction techniques for essential oils from selected plant materials will be studied.
